WILDLIFE REVIEW

An indexing and abstracting publication
of wildlife literature issued by the
Fish and Wildlife Service
UNITED STATES DEPARTMENT OF THE INTERIOR

June 1985 Colorado State University, Fort Collins, CO 80523 No. 197

Conservation
Soils ... 1
Plants
General, Ecology, and Techniques ... 2
Habitat Surveys ... 2
Wildlife
General ... 3
Techniques ... 5
Faunas, Natural History, Manuals ... 6
Natural Areas & Refuges ... 6
Endangered & Threatened Species ... 14
Introductions ... 15
Morphology & Physiology ... 15
Behavior ... 16
Pesticides & Pollution ... 16
Parasites & Diseases ... 18
Economics, Damage, Predation, Control ... 19
Hunting--Areas & Problems ... 20
Harvest and Hunting Statistics ... 21
Management & Research--General ... 21
Environmental Impacts & Assessments ... 26
Mammals
General ... 35
Techniques ... 38
Faunas, Communities, Manuals ... 38
Morphology & Physiology ... 41
Behavior ... 42
Pesticides & Pollution ... 43
Parasites & Diseases ... 43
Economics, Damage, Predation, Control ... 44
Marsupials ... 46
Moles, Shrews, Other Insectivores ... 49
Bats ... 51
Furbearers ... 60
Rabbits & Pikas ... 60
Rodents
General ... 63
Sciurids ... 65
Beaver, Muskrat, Nutria ... 69
Rattus & Mus ... 70
Other Rodents ... 72
Carnivores
General ... 85
Canids ... 86
Bears ... 89
Raccoons, Ringtail, & Coati ... 90
Mustelids ... 91
Cats ... 94
Other Carnivores ... 95
Marine Mammals ... 95
Ungulates
General ... 100
Cervids
General ... 101
Odocoileus ... 102
Other Cervids ... 105
Other Ungulates ... 109
Primates ... 121
Other Mammals ... 126
Birds
General ... 128
Techniques ... 130
Faunas, Communities, Manuals ... 132
Morphology & Physiology ... 146
Behavior ... 147
Migration & Banding Reports ... 151
Mortality & Survival ... 153
Pesticides & Pollution ... 153
Parasites & Diseases ... 160
Economics, Damage, Predation, Control ... 161
Gallinaceous Birds
Grouse & Ptarmigan ... 163
Phasianidae
General ... 166
Bobwhite ... 167
Other American Quail ... 167
Ring-Necked Pheasant & Allies ... 167
Other Phasianidae ... 168
Turkey ... 169
Other Gallinaceous Birds ... 170
Doves & Pigeons ... 170
Waterbirds ... 172
Waterfowl
General ... 178
Ducks ... 180
Swans & Geese ... 187
Loons & Grebes ... 194
Shorebirds, Marshbirds, and Allies ... 196
Seabirds & Allies ... 228
Raptors ... 237
Passerine Birds
General ... 263
Blackbirds, Starlings, Crows ... 264
Other Passerine Birds ... 270
Other Birds ... 302
Amphibians & Reptiles ... 312
Amphibians ... 313
Reptiles ... 323
AUTHOR INDEX ... 347
GEOGRAPHICAL INDEX ... 415
SUBJECT INDEX ... 435
SYSTEMATIC INDEX-MAMMALS ... 467
SYSTEMATIC INDEX-BIRDS ... 495
SYSTEMATIC INDEX-AMPHIBIANS/REPTILES 545
BOOK REVIEWS ... 557

AVAILABILITY OF REPRINTS AND PUBLICATIONS

WILDLIFE REVIEW does not distribute any of the papers abstracted herein, nor can the editor of WILDLIFE REVIEW undertake to obtain copies of these papers for anyone. A reprint of an article published in a journal may be available from the author, from the organization with which the author is affiliated, or from the publisher of the journal in which the article appeared. When an author's address is known, it is shown in square brackets following the citation. Addresses of most wildlife organizations can be obtained from the CONSERVATION DIRECTORY, an annual publication available from the National Wildlife Federation, 1412 16th Street, N.W., Washington, D. C. 20036, at a price of $9.00 per copy plus $1.55 postage and handling. This directory lists more than 900 agencies and organizations concerned with natural resources use.

Use of funds for printing this publication approved by the Director of the Office of Management and Budget, March 3, 1976.

Camera copy for this issue of WILDLIFE REVIEW has been generated by computer programs developed by the Editorial Office, U.S. Fish and Wildlife Service, Fort Collins, CO.

Wildlife Abstracts 1971–1975, by Terry N. Sexson and Paul C. Purdy. This 713 page single volume compilation of 19,021 citations consists of a main citation section plus author, geographical, subject, and taxonomic indices. The publication covers *Wildlife Review* numbers 141–159.

Wildlife Abstracts 1976–1980, by Terry N. Sexson and Paul C. Purdy. This 1313 page two-volume compilation covers *Wildlife Review* numbers 160–179. Volume I contains 35,781 citations. Volume II contains author, geographical, subject, and taxonomic indices.

Genoways, H. H. and F. J. Brenner, editors. SPECIES OF SPECIAL CONCERNS IN PENNSYLVANIA. Special Publication of Carnegie Museum of Natural History, Number 11. 430pp., illustrated, hardbound. Price $30.00.

In 1979, the National Audubon Society, Pennsylvania Game Commission, and Department of Environmental Resources met to form the Pennsylvania Biological Survey. The first activity of the Survey was to determine which plant and animal species were "in trouble" in the Commonwealth. This book represents the product of Phase I of that activity and provides species accounts for those organisms that may be extirpated from the state with time.

Following introductory statements by representatives of the 4 cooperators in the Pennsylvania Biological Survey, background information is provided on aquatic and terrestrial habitats, physiographic regions, and drainage patterns of the state. Six chapters are devoted to species accounts for plants, invertebrates, and 5 vertebrate groups. The collective findings for the chapters include: 36 species endangered; 41 species threatened; 85 species vulnerable; 55 species of unknown status; 79 species extirpated; and 1 species extinct.

The strength of the book lies in the individualized species accounts. The brief text on each species includes information about identification, geographical range (with both North American and Pennsylvania maps), habitat, life history and ecology, basis for status classification, recommendations, and up to 10 selected references. Citations of literature are not presented in text, adding to the general readability of the accounts. The author (and her or his address) of each account is identified at the end of the account, except for the bird chapter which was written by committee.

As stated in the Foreward, the purpose of this book is to alert agency personnel to the tenuous status of many of these species. The book is written more for the naturalist, presumably to ensure public vigilence upon agencies with jurisdiction within Pennsylvania. As such, it offers little to the professional biologist. Rather, its intent was to present a charge to especially the Pennsylvania Game and Fish Commission through a pleasantly illustrated volume for the naturalist's library.

This listing of species deserving special attention is typical of similar efforts being conducted in other states, and in some federal agencies. Unfortunately, major river systems often separate political entities: drainages and habitats do not. Species in the forest don't recognize the jurisdictions of contiguous political megastructures, but the editors admit that many species included herein are historically marginal to Pennsylvania. This is an eloquently conceived and polished tome that will enrich the lives of all Pennsylvanians interested in the natural world, and will be visibly on the shelves of every administrator in the Commonwealth.--Fritz L. Knopf, Ecology Branch, Denver Wildlife Research Center, Fort Collins, CO 80524-2098.

Weick, Friedhelm. BIRDS OF PREY OF THE WORLD. Paul Parey, Hamburg. 159pp. illustrated. 1980. In German and English.

An unusual bilingual effort to describe all of the diurnal raptors (Order Falconiformes) mainly by 40 tables and 40 color plates illustrating 1,144 "forms" (species, subspecies and color phases). The author, an artist, was strongly influenced by Peter Scott's "Colored Key to the Waterfowl of the World", and uses a similar Peterson Field Guide Technique, minus indicated field marks. The tables are a real "eye test" with some type, giving in both German and English common names (as well as scientific names often to subspecies), distribution and selected measurements opposite each plate might contain 25-30 individual birds in full body side view. The book is too large for a field guide (20x28cm.) but too brief to contain much life-history information. An introductory section, also bilingual, includes keys for size, color, shape of bills and other selected morphometric features.--R.A. Ryder, Fisheries and Wildlife Biology, Colorado State University, Fort Collins 80523.

Houston, D. B. THE NORTHERN YELLOWSTONE ELK. ECOLOGY AND MANAGEMENT. Macmillan Publishing Co., Inc., New York. 474pp., illustrated. 1982.

This book is the culmination of ten years of research by Dr. Houston on the northern Yellowstone elk herd. In addition to the data personally collected, Dr. Houston has incorporated information from management surveys, research, and historical records which date back to the early 1900's. As such, the book is an accumulation of virtually all that is known about elk in the northern Yellowstone ecosystem. Because the book deals almost exclusively with that ecosystem, it may not be as widely read as two recently published books by Boyce and Hayden-Wing (1979) and Thomas Toweill (1982) which are more general treatments of elk.

The book begins with an introduction which includes the purpose of the research and the hypotheses to be tested. It then proceeds with chapters on: the study area, the elk population-history and numbers, the elk population-seasonal distribution, the elk population-dynamics, physiological ecology, elk behavior, the vegetation-statics and dynamics, elk-habitat relationships, relationships among species of herbivores, elk-carnivore relationships, and management. Those chapters are followed by ten appendices encompassing over half the book, 20 pages of references, and a thorough index.

Few, if any, treatments of a single species contain such extensive historic information as this book. This is particularly evident in the three chapters dealing with the elk population and the chapter on the vegetation. Part of the chapter on the vegetation is based on an interpretation of vegetational changes which are illustrated in photos taken in the late 1800's and during Dr. Houston's tenure during the 1970's. The rest of that chapter is based on vegetation measurements made on permanent transects from 1930 to 1978. Physiological ecology and elk behavior are given less emphasis and these chapters are considerably shorter. The chapter on elk-carnivore relationships is likewise short, but contains quantitative information on elk as a food for carnivores. The chapters on elk-habitat relationships and relationships among species of herbivores contain much of the author's personal data and appear to reflect much of his research emphasis with the latter chapter incorporating considerable information from his recent predecessors. The narrative portion of the book ends with a short but definitive set of management recommendations for the vegetation, elk, other ungulates, and carnivores in Yellowstone National Park.

The appendices contain a variety of supporting documentation and information. From my point of view, the most interesting was Appendix V, Comparative Photographs. This appendix contains 51 plates of pairs of photographs taken up to 100 years apart which show obvious changes in vegetation over time.

I found few typographical errors in the text. Some of the drawn figures were difficult to interpret (e.g., Fig. 2.2 on p. 6). I thought that some statistical analyses were not biologically meaningful (e.g., the correlation between area occupied by elk with time on p. 30). All in all, the book is a complete treatment of the northern Yellowstone elk herd, and will be of interest to those familiar with Yellowstone National Park or who want a detailed analysis of a dominant species in a single ecosystem.--John L. Oldemeyer, Ecology Branch, Denver Wildlife Research Center, Fort Collins, CO 80524.

Merritt, J. F., editor. WINTER ECOLOGY OF SMALL MAMMALS. Special Publication of Carnegie Museum of Natural History, Number 10. 380pp., 1984. Price $45.00 (cloth).

This volume, comprising 37 original papers, is a significant contribution to our understanding of the winter ecology of small mammals. The papers are the result of an international colloquium held at the Powdermill Nature Reserve of the Carnegie Museum of Natural History in October of 1981. The 45 invited participants from six nations included specialists in several disciplines whose common interest was the importance of snow to the ecology of winter-active small mammals.

The subject areas and numbers of papers (parenthesis) in each include: physical environment and botany (5), geography (1), sampling methods (1, although detailed methods are included for most studies), thermoregulation and metabolism (6), reproduction and growth (8), behavior (3), and diverse aspects of ecology (13). The papers reflect "representative samples of Holarctic ecosystems where snow acts as a major selective force in the lives of small mammals." Predictably, most papers treat species of microtine rodents, but there are four papers on cricetine rodents (Peromyscus and Sigmodon), two on shrews, and four deal with multi-species communities.

For those mammalogists whose studies and information on small mammals come mostly from warmer areas or times of the year, this book is a revelation. The descriptive papers provide important information on the structure of subnivean mammal communities (and even on individual animals, whose brain morphology is shown to change with the season), whereas the behavioral and physiological papers shed considerable new light on the stresses to which mammals in winter are exposed and the short- and long-term responses that the mammals make. Several papers summarize available data for specific topics, like reproduction, and thus are good starting points in those areas.

The papers are easy to read and reflect a conscientious editing by Merritt and his colleagues at the Carnegie. The literature cited for each paper has been retained with the paper rather than trying to provide a single list of citations. One interesting benefit of this (other than the obvious simplifying of editing tasks) is to reveal the paucity of information in some areas of study. I noted only one minor unevenness in the book and that was in the quality of some of the figures. I am disapointed that the volume is as expensive as it is; nonetheless, especially given the significance of the information provided, it is competitive with similar books and well worth the price. --Michael A. Bogan, Ecology Branch, Denver Wildlife Research Center, Fort Collins, CO 80524.
